

RESCUEPACK - FALL ARREST RESCUE KIT

HR 046P

RescuePack is designed for recovery by lowering or lifting. RescuePack is the most versatile remote rescue system available anywhere. It is a simple, self-contained system designed to recover a suspended person from almost any situation. RescuePack can recover a suspended casualty by raising and/or lowering them. The optional deployment of the pulley system when raising simplifies the system for users, reduces potential rope twist and minimises the amount of rope required.

RescuePack needs only 25% of the rope used in traditional rescue systems. It also allows a casualty to be raised over an edge or guard rail. The unique combination of Quadra Rope Device and Hurricane Pro Devices delivers a mechanical advantage of up to 3:1 with automatic locking capability.

The Rescue Reach Pole provides a simple and effective means of attaching to the casualty's harness, providing the rescuer with an additional 3.5m of reach, sufficient to reach a casualty on an extended energy absorbing lanyard. RescuePack contains several patented products.

Length 50m Rope

Rated to
200kg

Code	Description	Qty	Rating	Conformity
Components:				
D01	Quadra life-lining back-up device	2	200kg	prEN 12841
D43	Hurricane pro locking pulley	1	200kg	EN 567, EN 12278, EN 12841(B)
CKS3	Karabiner, steel, D, twistlock	1	41kN	EN 362
CSN08	Screwlink, steel, oval, 8mm	1	35kN	EN 362
