

AP121 Timber Mount Anchor- For Tiled Roofs

AP121 Timber Mount Anchor

Limitations

- Anchor is not be used for Abseil/Twin Rope work
- Anchor is rated for 15kN fall arrest
- Max roof pitch - 30deg
- Minimum timber truss size 90 x 35 F7 or MPG10

Caution

- Inspect the timber for any knots, splits, cracks or rotting - do not install anchor in these areas.
- Do not install anchor near a nail/joining plate
- Ensure the screw does not cause timber to crack during installation (pilot drill to prevent cracking)
- Observe strengthening requirements
- Anchor must only be fastened to a structural roof truss member, nogins or small 'nailed-in' hip trusses may not be suitable.
- If there is any doubt as to the strength of the timber, consult with an Engineer.
